

MADHANAGOPAL S

Devops Engineer

EDUCATION

Sethu Institute Of Technology

Bachelor's Degree in Engineering (ECE)
2018 – 2022

SKILLS

- **CI/CD Tools** : Jenkins, GitLab CI/CD, GitHub
- **Operating System** : Linux (Red Hat) , Windows
- **Cloud Platforms** : AWS, GCP ,OCI
- **Containerization** : Docker
- **Version Control** : Gitlab , GitHub , Artifactory
- **Monitoring & Logging** : Kapacitor, Grafana
- **Scripting & Automation** : Bash, Python, Shell
- **Programming Language** : C, C++, Java
- **Frontend Technologies** : Html , CSS, Angular , Vue
- **Backend Technologies** : Springboot
- **Database** : MySQL

EXPERIENCE

Devops Engineer

Renault Nissan Technology Business center India | 2022 - Present

- Built and maintained CI/CD pipelines using **Jenkins** and **GitLab**.
- Monitored development and production environments with **Kapacitor** and **Grafana**.
- Managed **Linux** and **Windows** servers for multiple environments.
- Assisted in migrating PCP servers to **Oracle Cloud Infrastructure**.
- Collaborated with development teams to streamline release processes.
- Administered version control and artifact management with **Git** and **Artifactory**.

LANGUAGES

Tamil , English

PROJECTS

1.Cloud Infrastructure Migration to OCI

- Led the migration of **PCP** servers from on-premises infrastructure to Oracle Cloud Infrastructure (**OCI**), coordinating across teams to ensure minimal downtime.
- Conducted system performance optimization post-migration, tuning cloud resources to balance cost-efficiency and performance.

2.End-to-End CI/CD Pipeline Implementation

- Designed and deployed CI/CD pipelines for multiple projects using **Jenkins** and **GitLab** CI/CD, automating build, test, and deployment processes.
- Reduced deployment times by **30%** and improved development velocity through faster feedback loops and early bug detection.

3.Proactive Monitoring and Alerting System

- Set up a comprehensive monitoring and alerting system using **Kapacitor** and **Grafana**, enabling real-time tracking of server metrics and application performance.
- Defined detailed alerting rules and thresholds to catch potential issues before they impacted users, reducing incident response times by **40%**.
- Created custom **Grafana** dashboards for various servers, providing clear visibility into infrastructure health and key performance indicators.

4.Multi-Environment Server Management

- Configured and maintained **Linux** and **Windows** servers across development, staging, and production environments, ensuring high availability and security.
- Automated routine tasks like log rotation, backup scheduling, and disk space monitoring using **Bash** and **Shell** scripts.
- Implemented access control policies and security best practices, safeguarding environments from unauthorized access and vulnerabilities.

5.On-Call and Weekend Allowance Management System

- Developed a full-stack application using **Vue.js** for the frontend, **Spring Boot** for the backend, and **MySQL** as the database.
- Deployed the system on a Windows build server and configured access for all teammates to streamline on-call and allowance tracking.
- Automated the allowance calculation process, reducing manual entry errors and improving accuracy.
- Increased team productivity by **30%** by eliminating repetitive tasks and providing real-time allowance tracking and reporting.
